Centennial College

CENTENNIAL COLLEGE PROGRESS CAMPUS
COURSE COMP213 Summer 2025

Term Project

For the purpose of this group (max. 2 people) *term project* you will assume that a resort spa has contracted you to develop a public website consisting of at least 7 **pages**:

1. ***Home Page*** - Shows the spa's exterior and other information that reflects the spa's profile (mission statement, feedback statements from former customers, etc.) The design and layout should reflect the spa's mission statement. (**1 page**).

2. ***Available Services provided by the spa –*** The spa website also will have a web page showing all 3 services of the spa with a thumbnail picture for each, a brief description of the service, price information and a hyperlink to the detailed page (as per item 3. described below) (**1 page**)

3. ***3 Services Pages*** – Describe in detail each of the 3 spa services. The client wants a separate HTML document for each individual service, showing pictures of the service and additional information (treatment options, prices, atmosphere, etc.) (3 **pages**).

4. ***Appointment Form*** - An HTML page containing a form that can be completed by the spa visitor to book an appointment for the services they are interested in. The form should contain fields for the visitor's first name, last name, phone, email, type of service, appointment date and time, any health issues or food allergies and an additional comments text area. The information on the form is submitted by email to the spa's email address (**1 page**).

5. ***Site Map and Credits Page*** – An HTML page containing a sitemap (a list of links to all the pages in the spa's website) and a credits section – a list of websites that have been used for graphics and spa information (**1 page**).

The design of the website should reflect the spa's goals, using appropriate colours and easy to read fonts.

The general page layout and navigation has to be the same for all the pages in the website.
All the styling for fonts, colors, and hyperlinks etc. must be done with one *CSS style sheet that is attached to each page in the website*.

All the pages have to share a **common look and feel**, achieved through consistent placement of graphics and navigation and through sharing of a common color scheme.

Special attention should be given to the **proper use of white space** in order to create an effective design (use a light color scheme and make sure pictures are not touching the text on the pages).

Collect all the required information, graphics and pictures by researching free resources on the Web. (Mention credits for graphics and spa info on the **Credits Page**).

Upload the project on the studentweb server, test and make sure all your navigational and other links are working correctly. Provide the http link in the e-centennial final project dropbox and a "**_Final project_**" link to the website from each group member's home page, i.e. **index.html**. Also, create a zip file from the contents of your project folder and upload to the e-centennial Final project dropbox.

The project is **due on Wednesday, August 13, 2024 at 23:59. No late submissions please, due to the end date for the semester.**
